

# Uninstallation Guide

- Uninstall SOA Gateway Server - Linux, z/Linux, AIX and Solaris
  - Uninstall SOA Gateway Server - Windows
- 

## Uninstall SOA Gateway Server - Linux, z/Linux, AIX and Solaris

1. Ensure the SOA Gateway server is not running.

Change to the `<SG_install_dir>/apache2/bin` directory, replacing `<SG_install_dir>` with the location where you installed the SOA Gateway.

Run the command `./apachectl stop`

2. The `<SG_install_dir>` can now be removed. Use the command `rm -rf <sg_install_dir>`.

**Important:**

Once you run this `rm` command, all files and directories in "`<sg_install_dir>`" will be permanently deleted.

3. This completes the uninstall process.

Example:

```
# cd /usr/local/soaGateway/apache2/bin
# ./apachectl stop
# cd /usr/local
# rm -rf soaGateway
#
```

## Uninstall SOA Gateway Server - Windows

1. Start the Windows Control Center by clicking **Start -> Control Panel**
2. Select the **Add or Remove Programs**
3. Select **SOA Gateway 4.1.1** and click **Change/Remove**
4. Select **Remove** radio button and click **Next**
5. Click **OK** to uninstall the SOA Gateway
